Executive Summary
2000 Delaware Department of Correction
Incarceration Fact Book
November 2003

INTRODUCTION

Delaware Department of Correction (DOC) is a “unified” adult correction system, which makes Delaware different from most states in that in addition to being responsible for the prison population, it is also responsible for the detention and jail populations. Generally, a prison houses offenders sentenced for a felony to a term of a year or longer. A jail population is usually the responsibility of a county or city government and includes offenders sentenced for either a felony or misdemeanor to a term of a year or less. Detained persons include those held in pre-trial status, those held for the state government for a violation of probation, and administrative holds for other jurisdictions, including many types of federal holds. The Delaware Department of Correction Incarceration Fact Book attempts to provide an accurate summary of DOC populations and offender movements through the “unified” adult correction system.

While the 2000 Delaware Department of Correction Incarceration Fact Book remains in the same format used for the revised 1997-1999 Delaware Department of Correction Incarceration Fact Book (August 2001), there are additional data tables provided for a more detailed look into to areas, such as releases from DOC, movements by SENTAC category, and demographic information. The use of SENTAC categories for admissions, releases, and populations provides a look into the realm of violent and non-violent offenders within the Delaware Department of Correction.

In addition to the newly incorporated data tables mentioned above, there is also the inclusion of violation of probation (VOP) centers into the network of DOC facilities. The Sussex and Central VOP centers operate just as other 24-hour DOC institutions; however for the data used for the 2000 DOC Fact Book, the VOP centers cannot be analyzed exclusively. The reason for this is that they share institution codes with other previously coded institutions (e.g., Sussex VOP with Sussex Community Correction Center and Central VOP with Morris Community Correction Center). In March of 2003, DOC did assign a separate institution code for Central VOP, however, Sussex VOP still remains combined with Sussex Halfway House. *For the 2000 DOC Fact Book, the data for the VOP centers are reported in the community corrections category.*

The newly added demographic data tables are presented for each quarterly snapshot date by race, gender, age group, term, and level. The institutions are separated into the following categories: 1) Bureau of Prisons and hospitals, 2) Supervised custody, agreement on detainer and weekenders, 3) Absconders and escapees. The addition of demographic information to the updated Fact Book format provides a snapshot count for demographics of interest.

While the 2000 DOC Fact Book includes additional information of interest, it continues to face many of the same challenges that are inherent with a complex adult correction system. These challenges include new information systems that continue to try to improve, high demands on the information systems to capture complex sentences from the courts, the addition of new facilities, and the rapid movement of offenders through the numerous programs and levels within DOC.

Because of these system changes, the previous DOC Fact Book methodology can no longer reasonably represent the actual populations and movements in the Department of Correction. To correct this problem and to better reflect the actual populations and movements in the Department of Correction, the Statistical Analysis Center undertook a major revision of its computer system download programs and the methods used to analyze the data.

Under the old Fact Book process, an offender sentenced to over one year was assumed to be a Level V offender serving a prison sentence. Today, this assumption cannot be made as there is a large volume of probation violators and others being sentenced to Level IV for more than one year and held at Level V awaiting space at a Level IV program. Also under the old process, the supervised custody program was a small Level V inmate home confinement program. Today, Level IV offenders are just as likely to be a part of the supervised custody program. In fact, starting in 1999, the majority of those admitted to this program (per the mainframe computer files) are actually Level IV electronic home confinement offenders. Gradually, the supervised custody program has evolved, in a practical sense, from a Level V program to a Level IV program.

Many of the changes in DOC statistics are associated with the increased emphasis on drug treatment in prison and in halfway houses. Morris Correctional Institution is no longer a Level V facility, but a Level IV drug treatment center. Likewise, Webb Correctional Facility now receives most of its offenders as drug treatment “flow downs” from major institutions and is truly a mix of Level V and Level IV offenders.

In this report, major institutions are limited to facilities that originally receive most of the sentenced offenders. This includes Baylor Women’s Correctional Institution, Delaware Correctional Center, Sussex Correctional Institution, and Gander Hill. Also included in this category are Delaware inmates housed out of state, referred to as Compact Cases.

Delaware’s “major” institutions can hardly be compared to “prisons” in other states. Our major institutions house a complex set of offenders, ranging from someone with a short detention stay awaiting a preliminary hearing for a bailed release in a few days or even a few hours to offenders serving life sentences or on death row. In this revised DOC Fact Book, a full array of movement and population statistics are provided for these institutions. This includes the Level IV populations (most often offenders held at Level V awaiting a program “slot” at Level IV), detention, jail (Level V sentences of one year or less), prison (Level V sentences greater than one year), life sentences, and death row offenders. This improvement in reporting is more than academic as each of the subpopulations housed at a major

institution is related to different legal statuses and processes. The Delaware DOC must manage each type of offender within a single institution.

The new population subcategories are also important because they are related to extremely different statistical patterns. For instance, a large number of Level IV offenders are initially admitted to a major institution after sentencing for sentences of either less than one year or one year or more. These Level IV offenders, regardless of their sentence length, are not subject to the Truth in Sentencing minimum requirement of 75 percent time served. They actually serve a much smaller portion of their Level IV time at a Level V facility before being moved to a Level IV halfway house or program. We need to document this type of detail in order to revise our future population projections.

Even with these improvements, the DOC Fact Book does not fully capture the full complexity of DOC's populations and offender movements. For example, as previously mentioned, there are separate institutions that are reported under a single institution code in the current DOC mainframe system. Currently, information for these "unreported" parts of DOC require special studies that require on-site data collection. For example, the Delaware Adult Boot Camp study (May 2001) required extensive field work before analysis could begin. In spite of the progress in the revised DOC Fact Book, there is no question that there is more work to be done.

USING THE FACT BOOK

The 2000 Delaware Department of Correction Incarceration Fact Book provides incarceration information for the State of Delaware for the 2000 calendar year. The quarterly incarceration figures are generated using Department of Correction (DOC) mainframe data. The quarter-end dates are March 31, June 30, September 30, and December 31. These data undergo extensive review by the Statistical Analysis Center (SAC) to provide the most accurate representation available of DOC populations. This information is valuable in that it helps evaluate the correctional sector of the criminal justice system and provides the basis to develop a DOC population forecast. The development of the forecast will stem from the updated data series for 1997 and 1998 that are included in the same format as the 1999 data and this update for 2000.

The 2000 Delaware Department of Correction Fact Book is presented in the same revised format as the 1997-1999 Department of Correction Fact Book and focuses on admission counts, release counts, and snapshot populations for specified DOC institution or location categories (*a description of these categories follows later*). The tables were developed using the two information categories, crime type and SENTAC code.

DELAWARE SAC CRIME TYPES

The Delaware Code includes numerous criminal statutes. Efforts to organize these statutes and to assist discussion of incarceration information within the Fact Book resulted in crime categories. The crime category that is assigned to a DOC stay that is reported in the Fact Book represents to the best of our knowledge the most serious or lead charge of the offender for that DOC stay. There are 15 crime categories (CRIMs). When possible the crime category for an offender's crime was identified through exhaustive searches using the Judicial Information Center (JIC) and the Criminal Justice Information System (CJIS), as well as the SAC superior court sentence order database. There are, however, cases where the crime categories could not be identified, and they are coded as an unknown. The table below lists the fifteen crime categories with a description of what crimes they encompass.

Crime Category	Description
ASLT	Assault, including by motor vehicle
BURG	Burglary, trespass and related crimes
C/CT	Capias and contempt
DRUG	Drugs, Title 16, Chapter 47
DUI_	Driving while under the influence
FRAU	Fraud forgery and related crimes
HOMI	Homicide, including by motor vehicle
MISC	Miscellaneous, including kidnapping and arson
PROB	Probation and parole violations
ROBB	Robbery
SEX_	Sex offenses
THEF	Theft and stolen property, including motor vehicle
TRAF	All traffic, Title 21, except DUI
UNKN	Unknown offenses
WEAP	Weapon offenses

SENTAC CODES

Like crime categories, SENTAC codes are used to classify statutes in order to promote meaningful discussion of incarceration information in the Fact Book. Also like crime categories, the SENTAC code that is assigned to a DOC stay that is reported in the Fact Book represents to the best of our knowledge the most serious or lead charge of the offender for that DOC stay. The main characterization that SENTAC codes provide is whether or not a statute is violent or non-violent. SENTAC categories are assigned to the statutes just as crime types are assigned. An unknown SENTAC code is assigned only in instances where the statute could not be identified. The following table lists the SENTAC categories and their descriptions.

SENTAC Category	Description
VF	Violent felony
NF	Non-Violent felony
VM	Violent misdemeanor
NM	Non-Violent misdemeanor
XX	Miscellaneous crimes
XV	Miscellaneous violations
PP	Probation and parole violation
TR	Traffic offenses
UN	Unknown

INCARCERATION STATUS

The incarceration statuses include detained, indefinite sentences, jail (sentences of less than or equal to one year), prison (sentences greater than one year), life and death. Indefinite sentences, which are most often less than one year, are categorized in this Fact Book as either jail or prison based on the amount of time served by the offender.

LEVEL OF INCARCERATION

A sentenced offender can be incarcerated at either Level IV (quasi-incarceration) or Level V (incarceration). Offenders sentenced to Level IV can be “held at” a Level V facility or institution until Level IV space becomes available. For example, a Level IV being “held at” Level V could be awaiting space in a treatment program, work release, or the availability of an electronic monitoring bracelet for home confinement. There are rare occasions where a Level III (intensive supervision) probation offender is present in the DOC database. Also, present in the mainframe data are sentences with unknown levels. Like unknown crime types, all efforts are made to identify the level. If the level could not be found, it is footnoted on the data tables for each institution or location category.

SNAPSHOT POPULATIONS

The population of each institution or location at the end of a quarter reflects the quarterly snapshot population. This indicates the number of detainees or sentenced offenders in a single institution at the quarter-end snapshot date, which falls on the last day of March, June, September, and December. It is important to consider that a detainee or a sentenced offender may have entered and/or have been released from a different institution than the one at the time of the snapshot. It is also possible that an offender can enter a DOC institution after a

quarter begins and be released from an institution before the same quarter ends. This offender would not be counted at the time of the snapshot.

ADMISSION COUNTS

Admissions are separated into two categories: detained and sentenced. Detained refers to offenders held for pre-preliminary hearings, in pre-trial status, or for a special non-sentenced hold. Sentenced refers to offenders placed in a DOC institution or program by way of a court commitment, minor judiciary commitment, or a violation of probation or parole. Sentences that are one year or less in a major institution are considered jail sentences, and sentences greater than one year in a major institution are prison sentences. It is crucial to remember that the total number of admissions does *not* represent a total number of different offenders admitted. An offender can be admitted multiple times throughout the year for different crimes. Another possibility is that an offender can be admitted to institutions or locations a number of different times for a single crime that was committed. For example, an individual might have two detained admissions during the pre-trial time frame, a sentenced admission to Level V, followed by another sentenced admission to the Level IV portion of the sentence. This single individual would have four admissions for a single offense.

Historically, the institution code that was shown for sentenced admissions reflected the institution at release or the institution where the offender was housed at the time of the DOC data download. Prior to increases in the Level IV facilities, most offenders served their time in a major institution; whereas, today there is a significant flow of offenders to Level IV halfway houses or electronic monitoring before release. Like the 1997-1999 Delaware Department of Correction Fact Book, the 2000 Delaware Department of Correction Fact Book admission population figures by institution reflect the *initial* institution the offender entered. If the “last release” method of counting continued to be used, there would be an undercount of the population and movement in the major institutions. The snapshot populations in the non-major institutions are mostly representative of transfers from the major institutions.

RELEASE COUNTS

Release counts show the number of “last releases” from a single DOC stay. For example, if an offender is serving a Level V jail sentence and is transferred to another DOC facility during the jail stay, the transfer release will not be counted, only the final release for that Level V jail stay. Like admission counts, release counts are separated into two categories, detained and sentenced. Detained releases represent offenders released from holds for preliminary hearings and pre-trial events, or for special non-sentenced holds. Sentenced releases occur by way of court order. Also like admission counts, sentenced releases are categorized as jail if the sentence was one year or less or characterized as prison if the sentence was greater than one year.

CALCULATED LENGTH OF STAY

The calculated length of stay (LOS) estimates for the 2000 Delaware Department of Correction Fact Book do not include sentences with unknown levels, nor does it serve as a cohort measure. The calculated LOS is reached when the quarterly snapshot population is divided by the quarterly admission count and then multiplied by the number of days in that quarter. For the 2000 Delaware Department of Correction Fact Book, the calculated length of stay is reported for the major institutions by crime type, term, and level. This differs from the 1997-1999 Delaware Department of Correction Fact Book where a time served at release measure was provided to show the average time served in days by crime code, term, and level for all institutions combined. The focus on major institutions addresses the continued issue of DOC bed space, as well as accounts for the vast majority of DOC “initial” admissions. Tables showing the calculated length of stay for 1997-1999 are included in addition to the 2000 data tables.

INSTITUTIONS & LOCATIONS

The DOC institutions and locations that are included in the 2000 Delaware Department of Correction Fact Book have been organized into six basic categories. The categories are as follows:

- Bureau of Prisons – Major Institutions
- Bureau of Prisons – Webb Correctional Facility
- Work Release, Halfway Houses, and VOP Centers
- Supervised Custody and Home Confinement
- Other Institutions and Locations
- Absconders and Escapees

BUREAU OF PRISONS

The Bureau of Prisons (BOP) refers to major institutions that are mainly detention and Level V facilities. Both snapshot populations and admission counts for BOP totals are presented in the data tables. The BOP institutions are also broken out by gender. These data are important because they reflect the populations in the secure institutions where bed space is a concern. The institutions that constitute the BOP are listed below.

Code	Institution
01	Baylor Women's Correctional Institution
02	Delaware Correctional Center
03	Sussex Correctional Institution
09	Webb Correctional Facility
10	Gander Hill
33	Compact Case (i.e., prisoners being held in other states)

Webb Correctional Facility (WCF) is also under the authority of the Bureau of Prisons; however, we have separated WCF from the other BOP facilities because of the small number of offenders who were initially admitted to WCF. WCF is “fed” by transfers from major institutions largely for treatment purposes.

WORK RELEASE AND HALFWAY HOUSES (LEVEL IV FACILITIES)

The institutional counts for Plummer House Work Release Center, Sussex Work Release Center, and Morris Correctional Institution comprise this category. Included in the counts for Morris Correctional Institution and Sussex Work Release Center, respectively, are Central VOP Center and Sussex VOP Center. For the 2000 Fact Book these institutions could not be separated. These institutions tend to house a greater number of Level IV offenders, and are also used as a transition from Level V sentences into the community during the last six months of offenders’ sentences.

SUPERVISED CUSTODY AND HOME CONFINEMENT

In 1999, home confinement was added to the supervised custody institution counts. In 2000, supervised custody and home confinement continued to share the same institution code. In recent years, supervised custody has undergone a transition from a Level V program to a Level IV program. Prior to the mid-1990s, supervised custody was a Level V community program. Supervised custody, from the mid-1990s until 1999, was a community program with a mixture of Level IV and Level V offenders. In 2000, as in 1999, supervised custody is primarily a Level IV community program.

OTHER INSTITUTIONS AND LOCATIONS

The other institutions include Delaware state and local hospitals, agreement on detainer status, and weekend or staggered sentences.

ABSCONDERS AND ESCAPEES

DOC has specific codes to indicate if an offender is in abscond or escape status. It is important to consider the offenders in this status because when they are returned to DOC custody, they will again take up bed space.

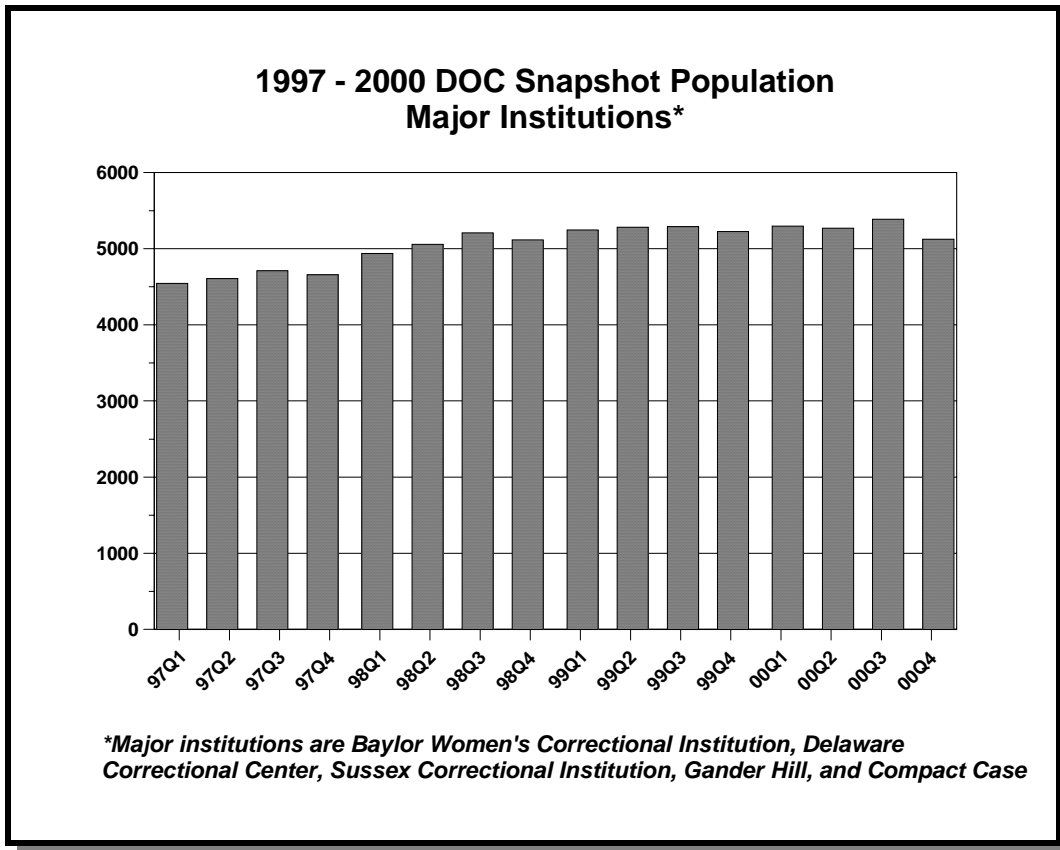

INSTITUTIONAL EVOLUTION

The DOC institutions and locations, as well as the offenders served, are continually evolving as the DOC populations change and the need for alternative or additional types of correctional facilities are deemed necessary. Each individual institution or specific category of institution has its own characteristics and definitions. For example, included in the Sussex Correctional Institution (SCI) counts are the Delaware Boot Camp population, which opened in April 1997. Understanding the intricacies of each institution or location is necessary for understanding the DOC population as a whole.

In 1999, DOC began accounting for home confinement cases by using the supervised custody institution codes. Currently, there is no effective way to distinguish between supervised custody cases and home confinement in the DOC mainframe database.

In 1999, DOC began accounting for home confinement cases by using the supervised cutsody institution codes. In 1998, there were 505 supervised custody "initial" admissions. In 1999, this count increased to 1,856 because of the inclusion of home confinement cases. Currently, there is no effective way to distinguish between supervised cutsody cases and home confinement in the DOC mainframe database.

Note¹: The admission counts reflect the initial institution to which the offender was admitted.

In 1999, DOC began accounting for home confinement cases by using the supervised custody institution codes. In 1998, there were 505 supervised custody "initial" admissions. In 1999, this count increased to 1,856 because of the inclusion of home confinement cases. Currently, there is no effective way to distinguish between supervised custody cases and home confinement in the DOC mainframe database.

Note¹: The admission counts reflect the initial institution to which the offender was admitted.

These length of stay (LOS) estimates do not include sentences with unknown levels. This is a calculated LOS where the LOS equals the quarterly snapshot population divided by the quarterly admission count multiplied by the number of days in the quarter. The calculated LOS is not a release cohort measure. The LOS is not calculated for other DOC institution categories because their "initial" admissions only account for a small portion of the total DOC admissions

TOTAL														

These length of stay (LOS) estimates do not include sentences with unknown levels. This is a calculated LOS where the LOS equals the quarterly snapshot population divided by the quarterly admission count multiplied by the number of days in the quarter. The calculated LOS is not a release cohort measure. The LOS is not calculated for other DOC institution categories because their "initial" admissions only account for a small portion of the total DOC admissions

These length of stay (LOS) estimates do not include sentences with unknown levels. This is a calculated LOS where the LOS equals the quarterly snapshot population divided by the quarterly admission count multiplied by the number of days in the quarter. The calculated LOS is not a release cohort measure. The LOS is not calculated for other DOC institution categories because their "initial" admissions only account for a small portion of the total DOC admissions

Left Intentionally Blank

**2000 DELAWARE DEPARTMENT OF CORRECTION
INCARCERATION FACT BOOK
DATA ISSUES AND TECHNICAL NOTES**

DATA ISSUES AND TECHNICAL NOTES

The DOC mainframe data that is initially downloaded undergo a vast array of quality checks. This leads to a number of data issues that have to be addressed before the data can be analyzed and the data tables in this report can be created

STATUTES

The statute that is listed for each DOCID determines the crime code, or CRIM, that is used to generate the data in the tables. Certain statutes that are listed in the DOC mainframe data are problematic. Attempted statutes, for example, do not reveal what crime is being attempted. Thus, it is important to determine the actual attempted crime so that a crime code can be assigned to it. Otherwise, it will be coded as a miscellaneous crime. All but a handful of the attempted statutes were reconciled for this report.

Capias statutes, like attempted statutes, do not reveal the true nature of the crime committed. When a capias is issued for a person's arrest, the offense that the person committed causing the arrest should be listed on the capias. In 2000, a mass effort was made to research all of the capias statutes to identify the actual charge. Thousands of capias statutes that were corrected, and the remaining capias/contempt can be assumed to be failure to appear/pay, etc.

On occasion, lesser statutes are listed for offenses that are, in fact, more serious. This situation is identified when a record shows a severe sentence for a minor crime. For example, there may be a misdemeanor charge that has a life sentence associated with it in the mainframe data. The issue becomes identifying the lead charge instead of the associated lesser charges.

DATA FIELDS

Data fields that are not fully populated after the DOC data download pose problems. If a record has one essential field that is empty, it is not unusual to have other related fields that are also blank. When the sentence type field is empty, SAC investigates the history pertaining to the individual to determine if he or she was sentenced to jail or prison. The level field indicates whether the individual was placed in a Level IV or Level V sentence. When the sentence type field is empty, it is not uncommon for the level field to be empty, as well. Empty date fields such as date of sentencing, effective date of the sentence, maximum sentence release date, and good-time release dates, are also frequently blank when sentence type and level fields are blank. It is important to note that the proportion of the total number of records in the DOC case file that have a combination of the above mentioned blank fields is small relative to the size of the entire file. However, a small percentage of error given the large size of the file results in a large number of records with errors. SAC does, however, give time and attention to each record to try and determine the correct information for these records. Failure to attend to these problems would result in erroneous and misleading statistics.

The release date data field is problematic when it is empty and the calculated maximum date has past. When quality checks are conducted, these cases are frequently identified as supervised custody or weekender records. Offenders sentenced to weekender or staggered sentences typically enter and exit institutions more frequently than other offenders sentenced to similar lengths of time. This increased movement results in a larger number of records in the DOC location file that tracks internal transfers in the DOC system. On occasion, the final record does not get closed out, resulting in an empty release date for that record. When this happens, it makes it appear as though the person is still in a DOC institution or location, thus artificially inflating lengths of stay estimates and populations counts. This type of problem occurs most frequently in the non-BOP institutions or locations.

The admission method data field, which is a three-character field, in the 1999 case file is completely populated; however, there are cases where the admission code begins with an "X" in the first position. An "X" indicates that at the time of the data download the field was still waiting data entry. When an "X" admission method code is encountered, other fields pertaining to sentencing are also frequently empty (e.g., sentence type). SAC investigates these cases to determine the admission method. Not all "X" admission methods were able to be determined, thus an admission method code was assigned based on other information in the case file specific to the record. The code assignments allowed the records to be classified as either detained or sentenced admissions.

TRANSITION BETWEEN LEVELS

Offenders can be sentenced such that they flow from a Level V status to a Level IV status. A data issue can arise when an offender is "held at" Level V while awaiting space at a Level IV treatment or work release center or waiting for an electronic monitoring bracelet to become available. Sometimes, a Level V offender appears to be housed beyond his maximum release date, when in fact he has moved or "flowed down" to his or her Level IV sentence. An offender in this situation is awaiting space in a Level IV program while being housed in a Level V institution. This issue is important because in the snapshot population data tables there may be sentenced offenders being "held at" Level V for Level IV space availability. Thus, any management analysis will erroneously show that an offender is illegally imprisoned.

INITIAL INSTITUTIONS

Capturing the initial institution was accomplished by using the location file that is created by downloading specific data fields from the DOC mainframe. For each sentenced admission, the offender's stay in a DOC institution or location is assigned a DOC identification number, or DOCID. The location file reveals the offender's movement (if any) through different institutions by way of internal transfers for each individual DOCID. For the records of

movement that did not have a release date, a standard “dummy” date was assigned. This allowed the location file records to be sorted by DOCID and release date for each movement (if any) for each DOCID. The location file, or child table, was then related to the case file, or parent table, which contains more specific information pertaining to each DOCID. With the tables related, a simple query populated a specific field in the case file with the initial institution for each DOCID. This change in how admissions to institutions are reported is valuable because the first institution in which sentenced offenders are placed can be identified.

COOPERATION WITH DOC

The Statistical Analysis Center would be remiss without mentioning the cooperation from representatives of the Department of Correction. On many occasions, it was necessary to clarify information, inquire about an offender’s status, etc. throughout the Fact Book process. DOC’s cooperation was integral in the completion of the 2000 Fact Book.
